Media Architecture

Integrating advanced digital technologies and considered architecture is one of our passions. We work closely and collaboratively throughout the design process, to ensure the considerations of the architect and wider-design team are met through our technology. We believe lighting and dynamic media can enhance experiences in the built space.

Catenary Lighting

With experience, comes great confidence—we're specialists in delivering catenary lighting systems. We can assist in developing and delivering your project from initial product selection and supply, through to structural and systems engineering, installation and commissioning of dynamic controls.

Interactive and Dynamic

As a specialist team with extensive knowledge in programming and integrating a range of control solutions (DMX, DALI, CASAMBI), we can realise simple moving and changing light scenes through to the most complex and interactive displays. Our ongoing support and maintenance systems will also ensure you are notified of any issues first.

Facades

Through the use of various shades of white lighting, historic buildings can be subtly given their rightful place in a city centre or through the use of coloured or dynamic lighting, buildings can be brought to life and act as a beacon for attention and impression.

Light Art

Our knowledge of light and fabrication, combined with our dedication to customisation and in-house control & programming, gives us a clear advantage when it comes to delivering an immersive light art experience.

Public Realm

Illuminating a public realm can have a dramatic effect on the atmosphere of the area. Using good quality lighting in the correct way can complement the features of the public realm and create a welcoming space.
